

Migration Services

Migration Services from **THE MHS GROUP** helps your business get it right the first time.

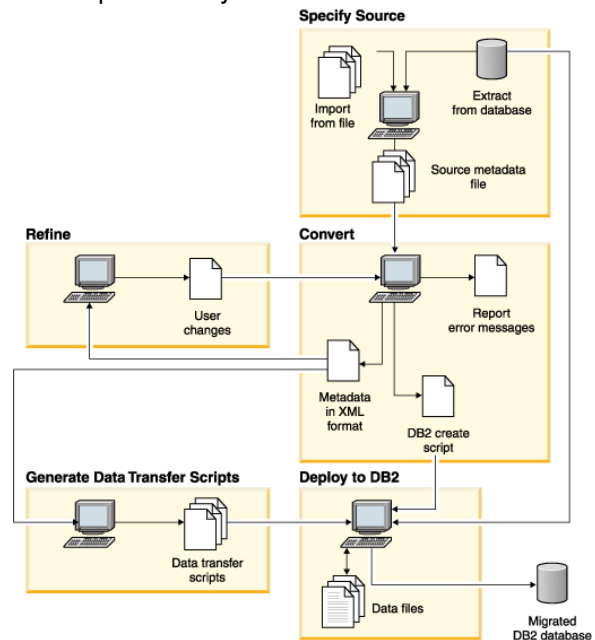

Are you planning to migrate your e-mail system, network operating system or workstations to take advantage of upgraded Microsoft® technologies? Let **THE MHS GROUP** help you achieve quick, optimal results, while keeping costs in line and avoiding downtime or lost productivity.

Windows Server 2000/2003

A migration to Microsoft® Windows Server 2003 can help simplify systems administration with scalable, directory-based software, enhance security features and lower your total cost of ownership. To get the results you expect, you'll want expert design, planning and implementation services, especially if you need to consolidate multiple operating systems, or lack in-house design experience with Windows servers.

In-depth experience and skills to help ensure a complete, trouble-free migration

At **THE MHS GROUP** we have the training and experience to help you migrate to Windows 2000/Windows 2003 from Novell, Windows NT®, OS/2® and UNIX®. From accelerated design and planning through deployment, we can help you achieve a cost-effective implementation designed to help reduce costs, streamline, standardize and consolidate your infrastructure, and leave you with a robust, flexible environment that can support your business now and in the future.

Exchange 2000/2003

If you're planning to migrate your e-mail system to Exchange 2000/2003, you may be facing some unknowns about security, costs, time to implement and the impact on your users.

Migration services that incorporate best practices

From planning through implementation, the specialists at **THE MHS GROUP** can help you achieve a quick, cost-effective implementation designed to reduce risk, enhance security and leave you with a robust, flexible system that can support your business objectives, now and in the future.

Windows 2000/XP Desktop

Planning to migrate to Windows® XP to reduce support costs, to help enhance security and augment remote access capabilities? To get the benefits you expect and avoid the problems you can't afford, you'll want expert design, planning and implementation services, especially if you're migrating from multiple workstations.
